Serial No.: 09/942,518

## IN THE CLAIMS:

Please amend the claims as follows:

1. (Currently Amended) A tone signal detection circuit for a receiving circuit for detecting at least one signal having a predetermined tone signal frequency (f<sub>E</sub>) which is contained in a received analog input signal, comprising:

- (a) a reference signal generator for generating an analog converter reference signal V<sub>ref</sub> which consists of a reference DC (V<sub>refDC</sub>) and a periodic reference AC (V<sub>refAC</sub>) having a variable fundamental frequency (f<sub>G</sub>), which is superimposed on the reference DC (V<sub>refDC</sub>);
- (b) an analog/digital converter for converting the analog input signal into a digital data stream in dependence on the analog converter reference signal (V<sub>ref</sub>); and <del>comprising</del>
- (c) a digital control circuit which adjusts the variable fundamental frequency (f<sub>G</sub>) of the reference signal (V<sub>ref</sub>) generated by the reference signal generator in accordance with the predetermined tone signal frequencies (f<sub>G</sub>) of the tone signals to be detected and evaluates the digital data stream output by the digital analog/digital converter for detecting a data pattern corresponding to the tone signal.
- (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the reference signal generator exhibits a reference voltage source for generating the reference DC (V<sub>refDC</sub>),

a controllable signal generator for generating the periodic reference AC signal (V<sub>refAC</sub>) in dependence on a fundamental-frequency adjusting signal, received by the digital control circuit, for adjusting the fundamental frequency (f<sub>G</sub>), and an adder which adds the reference DC

Serial No.: 09/942,518

 $(V_{refDC})$  to the periodic reference AC  $(V_{refAC})$  for forming the converter reference signal  $(V_{ref})$ .

- 3. (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the digital control circuit contains a zero transition counting device which counts the number of zero transitions of the digital data stream output by the analog/digital converter, the digital control circuit detecting a tone signal when the number of zero transitions per time corresponds to a predetermined nominal zero transition rate.
- 4. (Currently Amended) The tone signal detection circuit as claimed in claim [[1]] 3, wherein [[the]] various nominal zero transition rates of the tone signals to be detected can be adjusted in the digital control circuit.
- (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the digital control circuit contains a comparator circuit with adjustable signal threshold values.
- 6. (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the digital control circuit exhibits a digital band-pass filter for band-pass filtering the digital data stream.
- (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the detected tone signals are temporarily stored in a memory of the digital control circuit.
- 8. (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the digital control circuit outputs a corresponding interrupt signal to a central controller of the receiver circuit, with a predetermined tone signal combination which consists of at least one tone signal.

Serial No.: 09/942,518

9. (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the analog/digital converter contains a digital filter and a decimation filter.

- 10. (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the received analog input signal is an xDSL signal.
- 11. (Currently Amended) The tone signal detection circuit as claimed in claim [[1]] 8, wherein the receiver circuit is a modem receiver circuit.
- 12. (Previously Presented) The tone signal detection circuit as claimed in claim 11, wherein the modem receiver circuit switches the receiver circuit from a standby mode to a data reception mode by means of the central controller on reception of the interrupt signal from the digital control circuit.
- 13. (Currently Amended) The tone signal detection circuit as claimed in claim 1, wherein the digital/analog analog/digital converter is preceded by an anti-aliasing filter.
- 14. (Previously Presented) The tone signal detection circuit as claimed in claim 13, wherein the anti-aliasing filter is preceded by an automatic gain control circuit.
- 15. (Previously Presented) The tone signal detection circuit as claimed in claim 1, wherein the digital data stream output by the analog/digital converter is evaluated by a following data processing circuit of the receiver.
- 16. (Canceled)
- 17. (Canceled)
